1 Distributed systems - programming and management: On remote 77%

procedure call

Patrícia Gomes Soares

**Proceedings of the 1992 conference of the Centre for Advanced Studies on Collaborative research - Volume 2** November 1992

The Remote Procedure Call (RPC) paradigm is reviewed. The concept is described, along with the backbone structure of the mechanisms that support it. An overview of works in supporting these mechanisms is discussed. Extensions to the paradigm that have been proposed to enlarge its suitability, are studied. The main contributions of this paper are a standard view and classification of RPC mechanisms according to different perspectives, and a snapshot of the paradigm in use today and of goals for t ...

2 Threads and input/output in the synthesis kernel 77%

H. Massalin , C. Pu

**ACM SIGOPS Operating Systems Review , Proceedings of the twelfth ACM symposium on Operating systems principles** November 1989  
Volume 23 Issue 5

The Synthesis operating system kernel combines several techniques to provide high performance, including kernel code synthesis, fine-grain scheduling, and optimistic synchronization. Kernel code synthesis reduces the execution path for frequently used kernel calls. Optimistic synchronization increases concurrency within the kernel. Their combination results in significant performance improvement over traditional operating system implementations. Using hardware and software emulating a SUN 3 ...

3 Low contention semaphores and ready lists 77%

Peter J. Denning , T. Don Dennis , Jeffrey A. Brumfield

**Communications of the ACM** October 1981

Volume 24 Issue 10

A method for reducing semaphore and ready-list contention in multiprocessor

- 1 Synchronization in portable device drivers 99%

Stein J. Ryan

**ACM SIGOPS Operating Systems Review** October 1998

Volume 32 Issue 4

We present an overview of the synchronization mechanisms offered to device drivers by different operating systems and develop a foundation for writing portable device drivers by unifying these mechanisms. Our foundation has been used to implement an efficient portable cluster adapter driver for three different operating systems as part of the runtime system for a heterogeneous PC cluster. We show how our portable synchronization mechanisms map to the native synchronization mechanisms of these th ...
